Skateboard Material Customization

This guide will show you how to change both the graphic and the color of the wheels using Poiyomi.

Swapping materials

The Skateboard Prefab comes with 3 pre-made materials to choose from. You can find them under Fara_Assets/Accessories/Fara_Skateboard_01/Materials

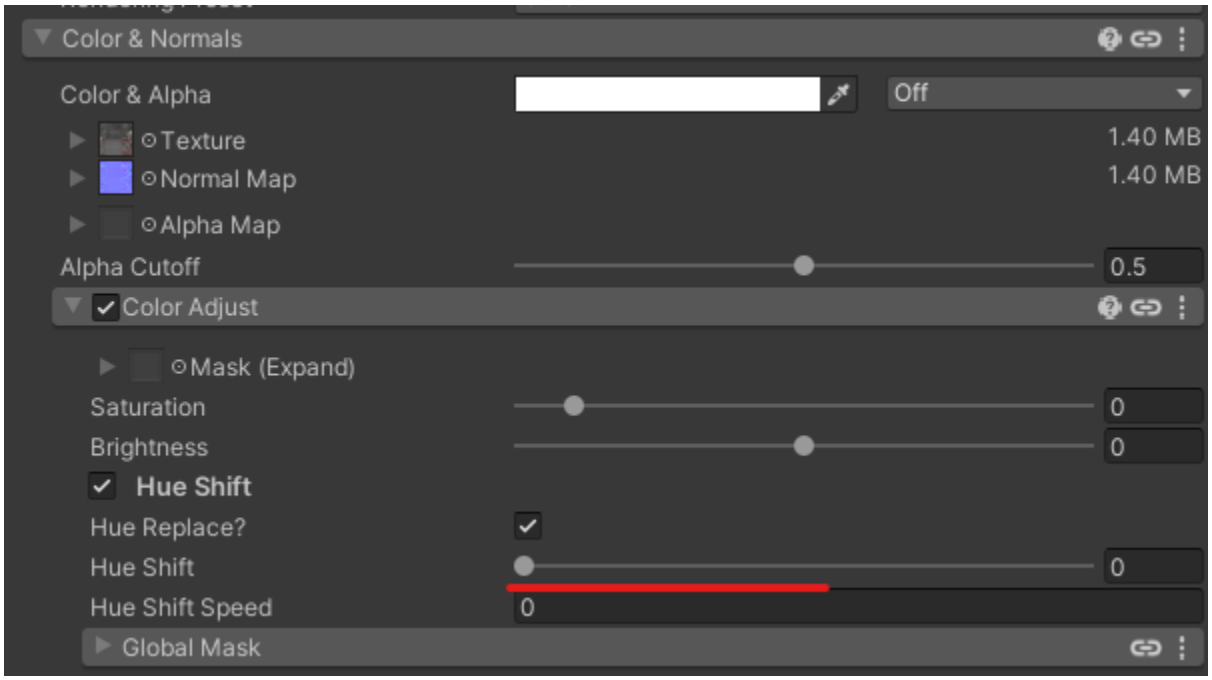

Drag and drop the one you want onto the board in your scene

Wheel colors

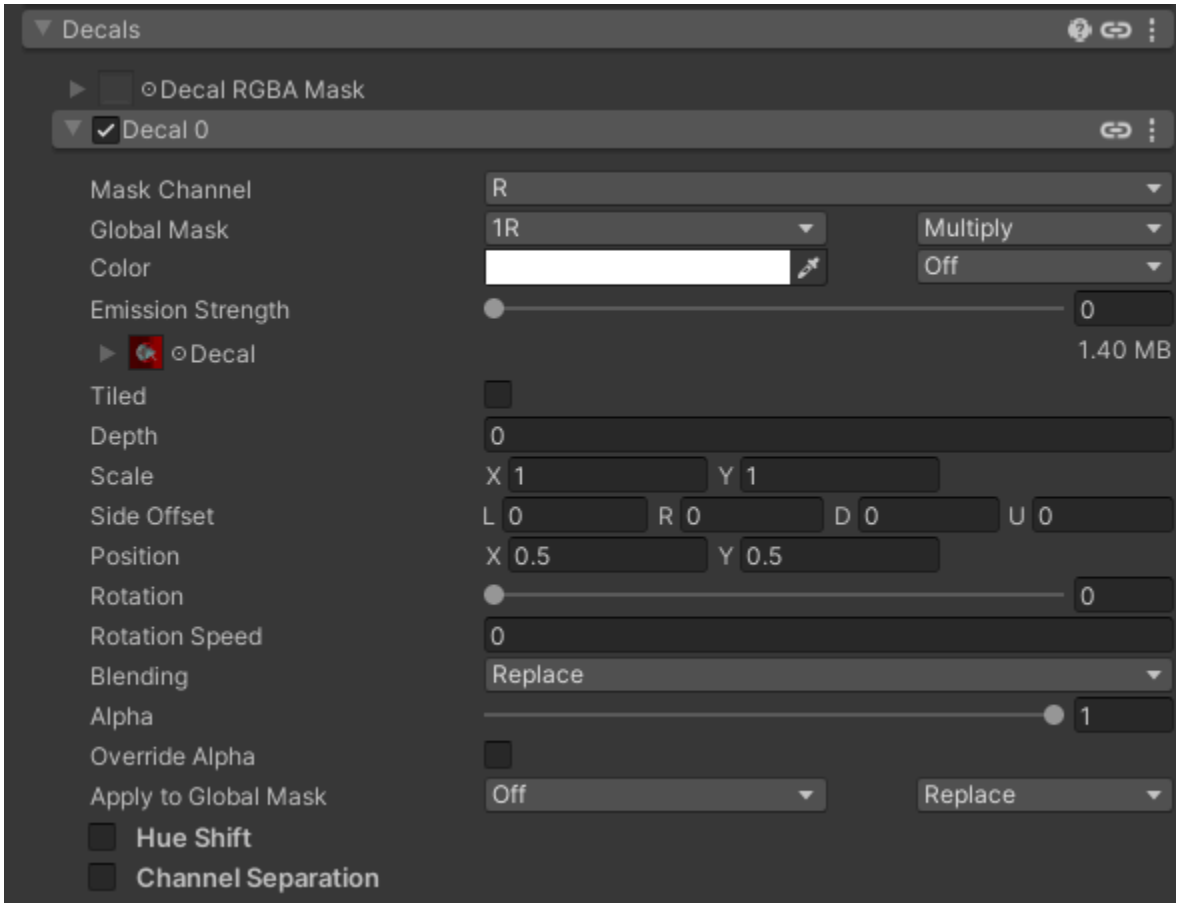

Wheel colors can be changed with the Hue Shift slider

Changing the graphic

The graphic can be changed inside of Poiyomi! No need for Painter

The graphic is a 2:1 texture using a second UV channel on the board mesh. I'm using the Poiyomi Decal feature to add a stand alone illustration onto the bottom. A separate mask is used to blend between the first and second UV channel materials

As long as your custom graphic is 2:1 (Ex 2048x1024, 1024x512) then it will just work! I've also included a UV map that you can use as a guide to where the graphic will show up on the board
